Which Kansas counties show stronger chronic care need, and how should SVH allocate resources?

Change in uninsured rates by county from 2022 to 2023

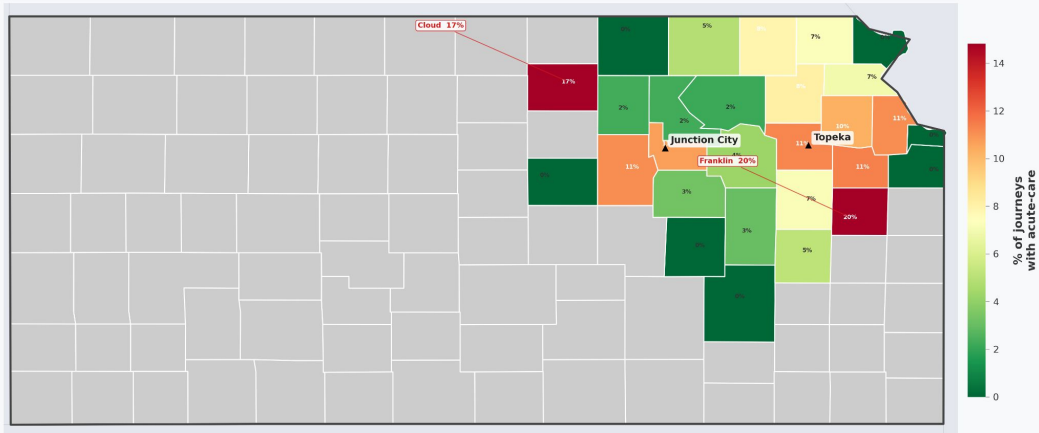

Diabetes acute-care rate: % of diabetes journeys involving ED, inpatient, hospital admission, or observation care.

Change in uninsured rates: county-level percentage-point change, 2022 to 2023.

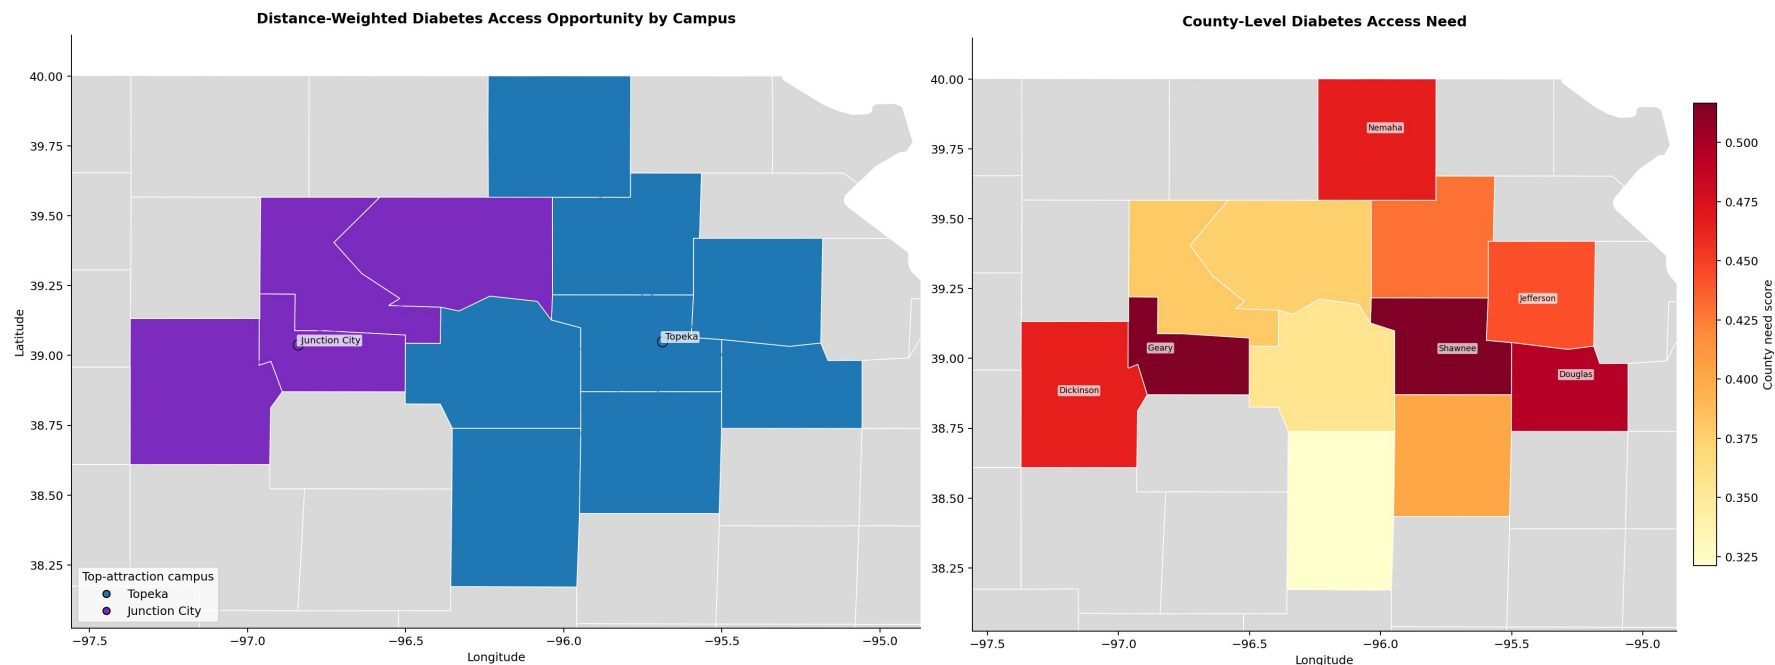

Big Beautiful Bill's pending impacts will strain rural Kansas by:

- tightening Medicaid enrollment rules
- reducing long-term funding support
- weakening incentives for KanCare expansion

Which Kansas counties have the highest acute-care rates for diabetes patients?

SVH can reallocate towards Junction City locations to support the vulnerable communities through transition

County-level diabetes access need measures where diabetes-related access pressure appears highest, using normalized uninsurance growth, diabetes acute-care burden, and population size.

Distance-weighted diabetes access opportunity by campus assigns each county's diabetes access need to nearby campuses using inverse-distance weights, producing a relative opportunity score for each campus.
